a
attribution gap (nominal minus truth)
catchability reduction δ_{dep}
decline rate κ
b
observed nominal coefficient
catchability reduction δ_{dep}
decline rate κ
c
profile log likelihood (max = 0)
abundance response β_N
fishery only (flat)
fishery + survey
d
profile log likelihood (max = 0)
warm edge catchability slope γ
e
nominal attribution gap (R.. = 0.64)
Fleet contraction
Movement rate
Catchability loss
Event count
Niche breadth
Abundance sensitivity
Targeting strength
Warming trend
Fleet learning rate
Catch variability
Fishing mortality
Survey CV
Survey encounter scale
Encounter scale
Survey coverage
standardised regression coefficient
f
survey bias for total abundance (R.. = 0.32)
Movement rate
Event count
Niche breadth
Warming trend
Survey coverage
Encounter scale
Targeting strength
Fleet contraction
Catchability loss
Fleet learning rate
Catch variability
Abundance sensitivity
Fishing mortality
Survey CV
Survey encounter scale
standardised regression coefficient
